

# FLOATS & TOOLS

Floats are used to smooth and improve the surface of the concrete. The floats swivel head allows the blade to be pushed and pulled across the surface.

- Floats improve final surface durability, finish and quality by reducing surface laitance.
- With 3 extension handles a 6m bay can be floated.
- Robust knuckle head allows the blade to be angled for ease of use and control on finish.

## Easy Bull Float

- A lightweight magnesium alloy blade with reinforcement to prevent warping.
- Rounded corners on float head to reduce track marks when floating.
- Robust heavy-duty design for tough site conditions and rental fleets.

## Big Blue Float

- A tempered Blue Steel blade that achieves an ultra fine finish.
- Extra rounded corners to prevent track marks when floating.
- The sprung steel blade glides over concrete while surface is firm but workable.

## Fresno Broom

- A special combination float for applying a consistent brushed non-slip finish to concrete.
- Leaves a tidy and consistent brushed finish.
- Push over concrete to improve surface consistency then pull to apply brush finish.
- Softer brush available as a spare part.

## Concrete Placer

- A special rake style tool that makes it easy to drag concrete when slab pouring.
- Double-edge blade, one side for moving higher volumes of material and the other for small surface adjustments.
- Reduces the effort required compared to using conventional rakes and shovels.
- Can also be used as a small surface tamper.

## Concrete Rake

- A special rake tool that makes it easy to drag concrete when pouring slabs.
- Double-edge blade, one side for moving higher volumes of material, the other uses a serrated edge for the finest surface adjustment.
- Reduces the effort required compared to using conventional rakes and shovels.
- Can also be used as a small surface tamper.
