

workers didn't go home as a result of a collision with a moving vehicle in 2020/2021.*

Let's reduce the risk

We care about work safety and the SiteZone Proximity Warning System is the UK's leading audible and visual warning system proven to reduce the risk of vehicle - pedestrian collisions.

However, we know this is only part of the solution. We're committed to help see behavioural change through our Don't Burst the Bubble campaign, educating and reminding workers about the need to stay safe.

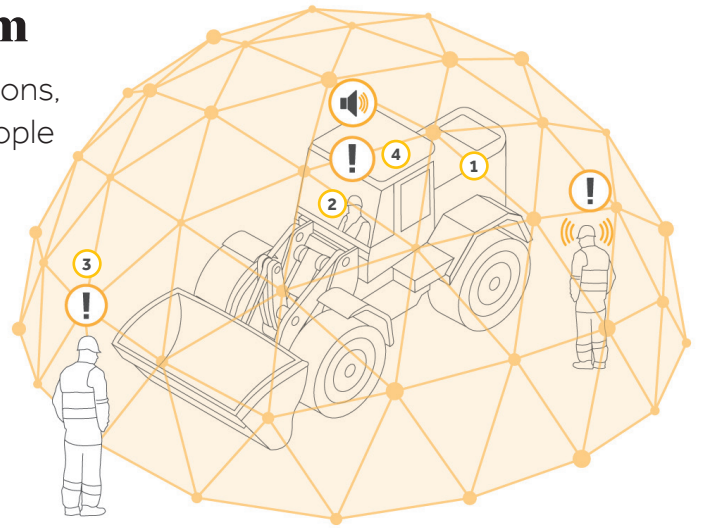

*HSE publication: Workplace fatal injuries in Great Britain, 2021.

SiteZone Proximity Warning System

Proven to reduce the risk of vehicle-personnel collisions, SiteZone can be used anywhere the proximity of people and vehicles working together is of concern.

Key components

1

SiteZone Base Station

Generates a detection zone or bubble around the vehicle using radio frequency. The size of this bubble can be varied to meet site requirements.

2

Operator Display Unit (ODU)

Fixes into the cab and alerts the machine operator to zone/bubble breaches and enables them to control authorised approaches.

3

Personal Tags

Designed to be an integral part of your PPE. They are tamper-proof, require no maintenance, and have 3-year battery life. SiteZone tags are available in a range of options including a helmet mount vibrating version.

4

External Alarm

When the zone is breached the beacon flashes continually and the alarm sounds to alert any tag wearing personnel breaching a safety zone that they have done so allowing them to retreat to a safer location. It also alerts others to the fact there has been an exclusion zone breach.

5

OverSite Telematics

Gain unique insights by remotely monitoring the interactions between vehicles and people across all your sites. Use this to make lasting safety improvements on-site.

5

Proven

- » Currently operating on major **National Highways projects**
- » **3,000** tags issued to protect Highways workers
- » Shortlisted for **2022 National Highways Safety Award**
- » Reviewed in **Raising the Bar Section 3**
- » Successfully creating **behavioural change** using information

Flexible

- » **Cost effective** – available to hire or purchase
- » **Quick to install** – 60 minutes for an EasyFit system
- » Fits to **all types** of machines
- » Automated zone control with **patent-pending SmartBubble®**
- » Works with **existing industry standards** including **Thumbs up and RedZone**
- » Supported by **ongoing training and site assistance**
