SOLAR TOOL CHARGE POD

Our Solar powered tool charge pods harvest energy from the sun to power your hand-held tools. With up to 36 individual lockers, all with plug sockets (230v) and USB ports (2.0) they have no external cables and so offer a safer, more sustainable way to keep your tools charged where and when you need them.

The solar power is stored in the on-board batteries for use when it's needed, and for spikes in demand there's also a 6 kva generator to boost charging power at peak times. The batteries and generator are all contained within the unit and are accessible via a lockable door.

The on-board generator is compatible with HVO (Hydrotreated Vegetable Oil). Should you wish to further reduce your environmental footprint and lower your CO2 emissions speak to any of our team about switching to HVO.

The charge pods also come complete telemetry, to help you monitor usage and measure your eco savings by viewing reports such as battery and generator runtime.

And the built in Ecosmart system efficiently manages the power supply between solar, battery bank and generator - so all you need to do is switch on and use.

REDUCE CO2 EMISSIONS AND NOISE ON SITE

CHARGE MULTIPLE BATTERY POWERED TOOLS AND HAND-HELD DEVICES

MONITOR USAGE AND REPORT ON RUNTIME AND UTILISATION OF SOLAR ENERGY

NO NEED FOR ANY EXTERNAL CABLES
